EXHIBIT #1 -J21-I2, J21-II, and J21-I Proposed Sedimentation Ponds

INTRODUCTION

Sedimentation Structure J21-I1 will be an earthen embankment, designed and constructed by Peabody Western Coal Company as a temporary sedimentation structure to control runoff and sediment from portions of the J21 disturbed surface mining area at the Kayenta Mine. The location of Structure J21-I1 and its watershed boundary are shown on Drawing No. 85400 (Sheet M-11) and Drawing No. 85405. The site-specific general construction plans are shown on the attached Exhibit 1.

This design report contains information specific to Structure J21-I1 that is in series with sedimentation structures J21-I2 & J21-I. J21-I1 is the middle pond in the series. Mine-wide design, construction, and reclamation information is presented in the "General Report, Kayenta and Black Mesa Mines, Navajo County, Arizona, for Peabody Western Coal Company", December, 1985 (PAP), Chapter 6, Attachment D, Volume 2, along with the methods and results of analyses used for slope stability, hydrology, and hydraulics, and in Chapter 6, Pages 11 to 42, "Sediment and Water Control Facility Plan".

INSPECTION

The construction site of the proposed Structure J21-I1 was inspected in January, 2000 by a Registered Professional Engineer from Peabody Western Coal Company, to assure that the site is suitable and no adverse conditions exist to prevent the successful construction of this structure. A detailed geotechnical investigation was not performed, rather, the information in Chapter 6, Attachment D was utilized for embankment design and will be utilized during construction to construct a stable embankment.

HYDROLOGY

The hydrologic analysis was completed using the computer program SEDCAD4 (see Appendices A, B, and C). Structure J21-II will be constructed in series with proposed Structures J21-I2 and J21-I. Structure J21-II is classified as a low hazard structure (see Drawing No. 85408). In addition, the mine area is sparsely populated with no one living in the downstream floodplain. The structure will impound less than 20 acre-feet and be less than 20 vertical feet in height from the upstream toe of the embankment of the natural stream elevation to the emergency spillway invert elevation. The combined capacities of J21-II and J21-I2 exceed 20 acre-feet; therefore, the spillway was analyzed using the 100-year, 6-hour storm event in lieu of the 25-year, 6-hour storm. All structures were conservatively assumed to be full to the emergency spillway at the time of 100-year storm event. The storage capacity of structure J21-II was analyzed using the 10-year, 24-hour storm event. The combined ponds in series were verified to completely contain the 10-year, 24-hour storm event, and provide adequate sediment storage volume, without discharging into the Dinnebito Wash.

The following parameters were used in the hydrologic analysis (see Appendix B & C):

	<u>J21-II</u>
1. Water Course length, L	0.770 mi.
2. Elevation Difference, H	260 ft
3. Time of Concentration, T _c	0.225 hr
4. SCS Curve Number	74
5. Rainfall Depth, 10-year, 24-hour storm	2.1 in
100-year, 6-hour storm	2.4 in
6. Drainage Area	183.5 acres

Values reported represent the watershed, which drains directly to Pond J21-II. Hydrologic input parameters for structure J21-I2 and J21-I are presented in separate design reports.

Muskingum routing parameters were utilized to route the 100-year hydrographs between the three structures. The routing parameters are presented in Appendices B and C, and are shown on a sub-watershed basis.

J21-II SEDIMENTATION POND HYDRAULICS TABLE

	Units	10-Yr, 24-Hr Storm	100-Yr, 6-Hr Storm
Initial Reservoir Volume Condition		Empty	Full to emergency spillway
Inflow			
Peak Flow	cfs	436.4	593.2
Volume	ac-ft	6.08	8.45
Storage			
Peak Stage	msl	N/A	6822.5
Emerg. Spillway Elev.	msl	6819.9	6819.9
Peak Storage	ac-ft	N/A	24.5
Storage Capacity	ac-ft	19.3	19.3
Outflow			
Peak Flow	cfs	N/A	562.0
Spillway Elevation	msl	6819.9	6819.9
Embankment Crest Elev.	msl	6825	6825.0
Peak Stage	msl	--	6822.5
Freeboard	ft	--	2.5
Emergency Spillway Channel			
Flow Depth	ft	--	2.6
Critical Velocity	fps	--	6.7
Mannings "n"	--	--	0.03
Width	ft	--	50
Outflow Channel			
Slope	%	--	15
Normal Velocity	fps	--	9.8
Normal Depth	ft	--	1.1
Mannings "n"	--	--	0.059
Riprap D ₅₀	in	--	9

The hydrologic analysis gives the storage volume required to contain the 10-year, 24-hour storm, and the remaining storage volume available for storing sediment. Structure J21-I1, combined with Structures J21-I2 and J21-I has adequate storage capacity to contain the 10-year, 24-hour storm and reasonable sediment storage capacity. The combined storage capacity was determined for all three structures in series and the results of the analysis are presented in the following table.

Combined Storage for Structures J21-I1, J21-I1 and J21-I

	J21-I2	J21-I1	J21-I	COMBINED
Total Storage Capacity	19.8	19.3	18.6	57.7 acre-ft.
10-Year, 24-Hour Storm Inflow	36.69	6.08	0.05	42.82 acre-ft.
Available Sediment Storage Capacity	-	-	-	14.88 acre-ft.
Sediment Inflow Rate/Year	4.54	1.03	0.02	5.59 acre-ft.
Sediment Storage Life	-	-	-	2.7 years

CALCULATED HYDROLOGIC DATA

PROJECT: J21 AREA

STRUCTURE: J21-I1 Middle Pond

TIME OF CONCENTRATION:

Start Elevation (ft) =	7070
End Elevation (ft) =	6810
Elevation Difference, E (ft) =	260
Watercourse Length (ft) =	4065
Watercourse Length, L (mi) =	0.770
Tc = (11.9L^3/E)^0.385 =	<u>0.225 hours</u>

ROUTING PARAMETERS:

Between structure routing parameters were calculated using the SCS Upland Method in SEDCAD4. Input and output parameters are shown on the SEDCAD4 printouts in Appendices C.

SCS CURVE NUMBER:

Cover Type	Soil Group	Curve Number	Area (acres)	CN*Area
Pinyon Juniper	B	65	11.5	747.5
Pinyon Juniper	D	83	81.5	6764.5
Sagebrush	B	60	58.2	3492
Sagebrush	D	79	32.3	2551.7
TOTAL:			183.5	13555.7

Weighted CN = Total CN*Area/ Total Area = 74

DRAINAGE BASIN AREA:

183.5 Acres

PEABODY WESTERN COAL COMPANY
CALCULATED SEDIMENT YIELD

PROJECT: J21-I1 Middle Pond

The following spreadsheet calculates the predicted sediment yield for the project area. The gross sediment yield is determined according to the Revised Universal Soil Loss Equation.

PARAMETER DESCRIPTION	VALUE
Annual Rainfall Factor	40.00
Soil Erodibility Factor	0.21
Length Slope Factor	7.07
Cover Factor	0.21
Practice Factor	1.00
Gross Annual Sediment Yield	12.73 tons/acre/year
Sediment Density	94.00pcf
Gross Annual Sediment Yield	0.0062 acre-feet/acre/year
Sediment Delivery Ratio	90%
Estimated Annual Sediment Yield	0.0056 acre-feet/acre/year
Watershed Area	183.5 acres
Watershed Annual Sediment Yield	1.03 acre-feet/year
Number of years	1 years
Calculated Sediment Volume	1.03 acre-feet
