

TABLE 4.3-1

PRE-CROPLAND SEED MIXTURE

Species	Scientific Name	Variety	Pounds PLS/Acre
Russian wildrye ¹	<i>Elymus junceus</i>	Vinall, Sawki, or Mayak	4
Intermediate wheatgrass ^{1,2}	<i>Thinopyrum intermedium</i> (<i>Agropyron intermedium</i>)	Oahe, Greenar or Chief	7
Pubescent wheatgrass ^{1,2}	<i>Thinopyrum intermedium</i> (<i>Agropyron intermedium</i>)	Mandan 759	7
Alfalfa	<i>Medicago sativa</i>	Travois or Ladak	3
Total			21

¹ Altai wildrye (*Elymus angustus*) and Dahurian wildrye (*Elymus dahuricus*) will function as a substitute, depending on availability and price of both species.

² Pubescent wheatgrass is genetically identical to intermediate wheatgrass. However, they are treated as separate and distinct species for the purpose of purchasing seed only and not for any measurements needed for bond release

PLS = pure live seeds
